

Wind Development Survey

A steering committee for Alternative Energy Development in Gregory County is in the process of forming a Landowner's Association for Development of Wind Energy. The concept of a Landowner's Association begins with a group of landowners in close proximity to one another who have a common interest in identifying a contiguous block of land suitable for commercial wind development. The goal is to assemble an association of landowners who will together and collectively market their wind resources to the highest paying developer.

This survey is being sent to all Gregory County land owners. Our goal is to maximize the potential to gain wind developers' interest. The steering committee has already had contact with several developers interested in working with us.

The purpose of this survey is to determine land owner interest so that boundaries of blocks of land can be established within the survey area.

If you wish to be considered to be included, it is important that you complete the survey and return it by October 1, 2009. Answering and returning the survey does not bind you or your property to anything.

Please answer the following questions:

1. Are you interested in wind energy development on your property? Yes No
2. If yes, please
 - A. Correct your address if needed
 - B. List the legal description of your property (this can be found on your tax statement. Use additional sheet if necessary.)
 - C. Give an approximate total number of acres listed.
3. Would you like to serve as a steering committee member?
